

FileMaker 2026 Release

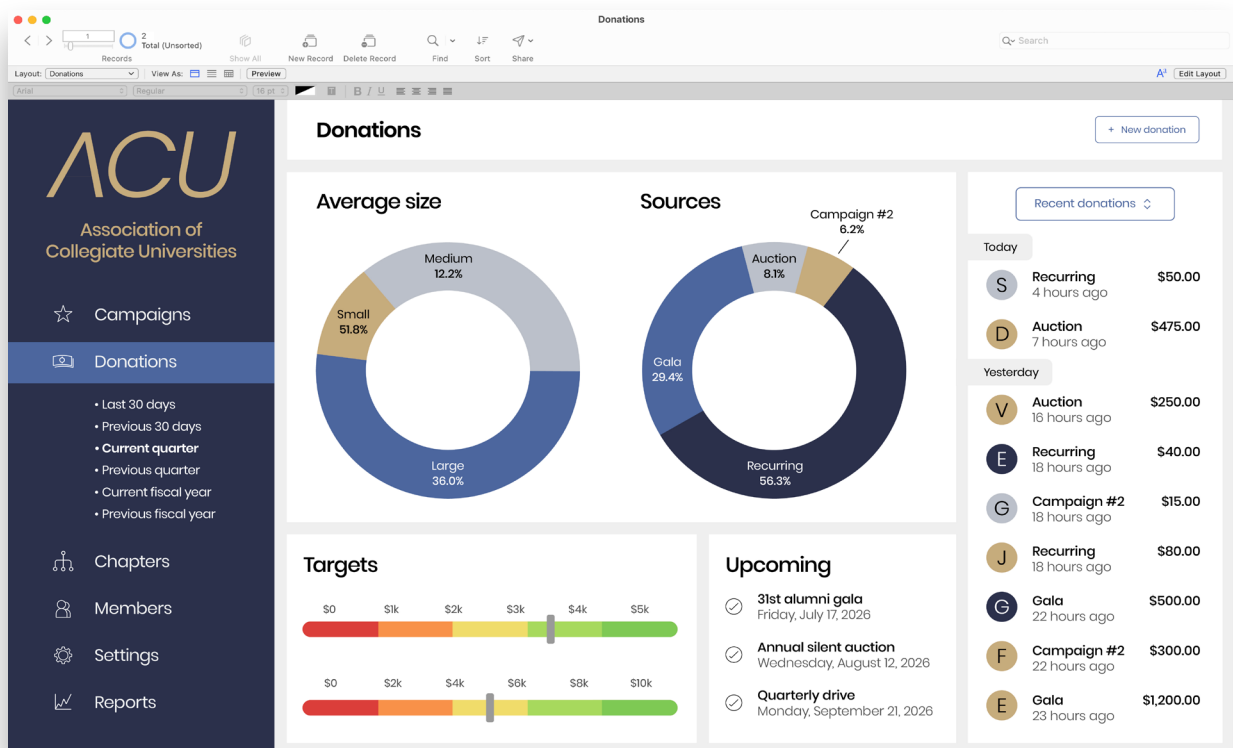

You get to create AI-powered solutions by building on your FileMaker foundations with the data you already have, all through a unified platform.

Clariss FileMaker 2026 delivers on a simple promise: a faster, smarter, and more resilient platform that empowers every developer, every organization, and every user.

With meaningful improvements across the development experience, AI integration, server infrastructure, and accessibility, FileMaker 2026 is the platform upgrade your solutions have been waiting for.

clariss.com/filemaker

- **Build custom apps faster:** New tools and a smarter, cleaner development environment mean your team can create powerful business solutions in less time, with less effort.
- **Harness the power of AI:** Now supporting Google Gemini, FileMaker 2026 lets you search your data naturally, generate insights instantly, and put AI to work inside the apps your business already runs.
- **Ready for the future:** Full compatibility with the latest operating systems, security standards, and AI providers means FileMaker 2026 is built to grow with your business — and keep your data safe along the way.

What's new in FileMaker 2026

- **Standby Server and Remote Backup:** Those add-on options for FileMaker Server 2026 strengthen business continuity — Standby Server enables a ready failover environment to minimize interruption when the active server becomes unavailable, while Remote Backup leverages progressive backup technology to securely store incremental solution backups in Claris-managed cloud storage.
 - **Redesigned Development Experience:** A context-aware Adaptive Inspector, collapsible script steps, custom function folders, and new field entry by calculation reduce friction and help developers build faster with fewer workarounds.**Streamlined Web Connectivity:** Develop superior web solutions with improved tools and simplified processes for integrating FileMaker with broader web technologies.
 - **Expanded AI Integration:** Google Gemini support joins existing AI providers, and new field/table annotation tools give AI models richer semantic context, improving the quality of natural language queries and LLM-powered features.
 - **Modern Infrastructure Compatibility:** Full support for macOS 26, Windows Server 2025, OpenSSL 3.5 LTS, and Apache Tomcat 10.1.44+ keeps FileMaker deployments secure, compliant, and future-ready.
 - **Meaningful Accessibility Improvements:** FileMaker WebDirect gains improved screen reader support, semantic HTML, focus management, and ARIA compliance as part of Claris's ongoing WCAG 2.1 commitment — with existing layouts benefiting automatically, no redesign needed.
-

Technical specifications

FileMaker Pro

- macOS Tahoe 26
- macOS Sequoia 15
- Windows 11 Enterprise and Pro Editions (64-bit only) (25H2)
- Windows 11 Enterprise and Pro Editions (64-bit only) (25H2)

FileMaker Go

- iOS & iPadOS 26 and visionOS 26
- iOS & iPadOS 18 and visionOS 2
- iOS App SDK Xcode 26 & 16

FileMaker Cloud

- Ubuntu 22.04

FileMaker WebDirect, FileMaker Server Admin Console, FileMaker Cloud Admin Console, Claris Customer Console

- Desktop browsers: Safari 26 minimum, Chrome 147 minimum, Microsoft Edge 14 minimum

FileMaker WebDirect and Claris Customer Console

- Mobile browsers: Mobile Safari on iOS 26 minimum, Chrome 147 minimum

FileMaker Server

- macOS Tahoe 26
- macOS Sequoia 15.0
- Windows Server 2025 Datacenter (with Desktop Experience)*
- Windows Server 2025 Standard Edition (with Desktop Experience)
- Windows Server 2022 Datacenter (with Desktop Experience)*
- Windows Server 2022 Standard Edition (with Desktop Experience)
- *Windows Server Datacenter works, but isn't fully tested.
- Ubuntu 24.04 LTS AMD, ARM
- Ubuntu 22.04 LTS AMD, ARM
