

Reseller Quick Resource Guide

Claris FileMaker 2026 Release

Gain immediate value with FileMaker's 2026 release

Claris FileMaker 2026 delivers on a simple promise: a faster, smarter, and more resilient platform that empowers every developer, every organization, and every user.

With meaningful improvements across the development experience, AI integration, server infrastructure, and accessibility, FileMaker 2026 is the platform upgrade your solutions have been waiting for.

AI-Powered and Web-Connected Enhancements

- **AI for All** – Leverage your existing FileMaker data to enable LLM-powered features across your apps, unlocking faster insights and smarter workflows.
- **Unified Platform Integration** – Use FileMaker alongside Claris Studio and Connect with improved data interoperability and simplified onboarding.
- **Enhanced Developer Journey** – Benefit from expanded learning resources and community support throughout your app development lifecycle.

Simplified Admin Experience

- **Disaster Recovery & Business Continuity** - Rapidly recover from outages, disasters, and ransomware events using Standby Server and Remote Backup tools. Reduce recovery time and maintain business continuity with automated failover and offsite backup strategies.
- **User Experience & Accessibility** - FileMaker WebDirect now meets WCAG 2.1 standards with improved screen reader support, ARIA compliance, and better focus management. Existing layouts benefit from accessibility improvements automatically — no redesign or migration required.
- **AI-Ready Architecture** - Add semantic meaning to your schema with new field and table annotation tools, improving the quality of AI-generated insights and natural language queries. Leverage Google Gemini integration alongside new metadata functions like BaseTableComment and FieldAnnotation to build and maintain AI-powered solutions natively in FileMaker.

- **Developer Productivity** - The redesigned Adaptive Inspector, collapsible script steps, custom function folders, and field entry by calculation eliminate everyday friction points. New PDF text extraction, custom dialog positioning, and expanded XML import/export tooling give developers greater control without layout workarounds.
- **Server Stability & Support** - Automatic crash recovery for the Web Publishing Engine, OData service, and Data API means services self-restart — reducing downtime without manual intervention. Full support for macOS 26, Windows Server 2025, OpenSSL 3.5 LTS, and Apache Tomcat 10.1.44+ ensures secure, compliant, and future-ready deployments.

Improved Organizational Security

- **OpenSSL 3.5.5** - Defend against known vulnerabilities with updated security protocols to protect your apps and maintain operational integrity.
- **Granular Access Control** - Prevent unintended schema changes during script execution by limiting access to Manage Database for non-admin users.
